

Assembled Sprockets

Assembled sprockets come in segmented and ring types.

1. Segmented type: Tooth tips are of cast stainless steel and bosses are of ductile cast iron.
2. Ring type: The tooth tips are of stainless steel or plastic and bosses are of ductile cast iron.

Assembled sprockets also help to achieve similar lifespan extension in stainless chains.

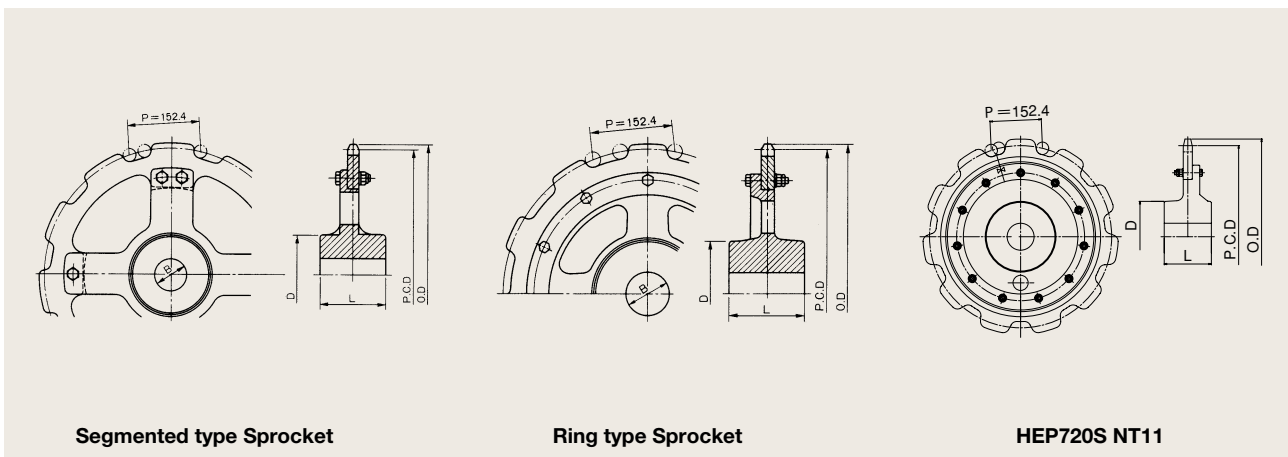

For stainless the boundary between the tooth tip and the boss is treated to prevent electrolytic corrosion.
